## DETAILED ACTION

### *Claim Rejections - 35 USC § 112*

Claims 5-19 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In each of the independent claims, "sub-monolayer islands" is not clear. The specification states that sub-monolayer islands "may be understood as layers of semiconductor material that do not cover the entire growth surface of the semiconductor body basically available for the growth processes of the layers, but rather only a portion thereof." (page 3, third full paragraph) So would a sub-monolayer island be any different from an ordinary island? After all, if a material is formed as an island, it would not cover the entire surface on which it lies. What is it that makes an island a "sub-monolayer" island?

In particular, the examiner needs to determine whether Applicant's sub-monolayer islands are distinct from ordinary quantum-dot-type islands, exemplified by for example the Sugiyama reference cited on the PTO form 892, which notes at column 2, line 3 the Stranski-Krastanow growth mode that gives rise to islands of one semiconductor within a layer of a semiconductor of different lattice constant.
